

Compute on-time rates from counts for each route:

```
on_time <- c(142, 98, 201, 87, 165)
total   <- c(154, 110, 215, 95, 178)
rate    <- round(on_time / total * 100, 1)
cat("On-time rates (%):", rate)
```
